Horst Construction selects industry-leading Viewpoint V6 Software® to streamline operations and increase efficiency

LANCASTER, Pa. — After an extensive search, Horst Construction has selected Viewpoint V6 Software® to fully integrate its operations, including accounting, payroll and project management systems. The SQL and .NET-based software is designed to increase the efficiency and profitability of mid-range and large-volume construction firms through data-driven decisions.

According to Harry Scheid, president of Horst Construction, “Our goal was to find a fully integrated solution that would eliminate duplicate entry while enforcing standards and procedures. We also needed a system that was flexible, easy to administer, but offered the technical and architectural sophistication to scale as we grow.”

The software is a product of Viewpoint Construction Software, of Portland, OR, which has been serving the construction industry with leading-edge information management solutions for more than 30 years. For more information about Viewpoint, visit www.viewpointcs.com.
